

Homework 2 Y1 Life under water

Set: 26.1.24 Return: 16.2.24

After half term we will be celebrating British Science week. For British Science week we will be looking at life under water including animals and plants.

This terms homework is for you to create an information poster naming and identifying common animals and plants in the marine life.

You can use a variety of materials to decorate your poster as it links nicely to what we have been learning about currently in Science.

If you would like a challenge, see if you could write onto your poster the types of threats seen in the marine life. Looking forward to seeing your posters!
